STUCCHI SOLUTIONS
OIL & GAS SUCCESS

OVERVIEW
Providing a true solution—instead of automatically fulfilling an order 'no questions asked'—results in a complete reduction of environmental impact and an increase in productivity.

CHALLENGE
Coupler connections must be performed quickly and efficiently when servicing oil and gas wells, and any incorrect connection can lead to failure, safety concerns, and costly unscheduled downtime. Coiled tubing service providers are called in to mitigate operational issues, so it’s important for them to optimize safe and efficient uptime.

SOLUTION
Stucchi’s sales and engineering teams worked directly with their Oil and Gas Customer’s team in the field to tailor a successful solution, making the product modifications and improvements to create a heavier-duty multi-coupling plate that was more tolerant of oilfield abuses.

The Stucchi Solution— an auto-locking, single motion connection, using the Multi-Coupling Plates.

Stucchi multi-coupling plates are designed to improve productivity and efficiency, reduce downtime, and improve performance and safety. With a single handle, single motion connection and auto-locking system, they eliminate crossing of lines and ensure that couplers are fully connected, therefore reducing downtime.

RESULTS
Implementing Stucchi customized multi-coupling plates has helped their Oil and Gas Customer create a competitive advantage.

BENEFITS
Now operating at full capacity, the oil & gas company

- no longer faces costly unscheduled downtime
- has unsurpassed reliability
STUCCHI SOLUTIONS
MEASURE THE BENEFITS

Delivering Safety/Health, Total Customer Satisfaction, Efficiency, Environmental, and Productivity Results

✔ ENSURE SAFETY
- Reduce number of reportable workplace incidents and injuries
- Meet continuous improvement safety initiatives
- Secure operator safety by defeating ‘the silent killer’, stored energy with thermal expansion
- Reduce incidents of slips, trips, and falls caused by leaking hydraulic fluids

✔ IMPROVE EFFICIENCY
- Meet deadlines by remaining on schedule
- Eliminate work shutdowns due to leakage concerns
- Save time switching out equipment lines
- Create more time for preventive maintenance

✔ TOTAL CUSTOMER SATISFACTION
- Meeting total customer needs for Safety/Health, Efficiency, Environmental Impact and Productivity issues
- Offering total solutions instead of stop-gap measures alone, for complete customer satisfaction

✔ ELIMINATE ENVIRONMENTAL ISSUES
- Reduce cost by eliminating fines and remediation fees
- Protect environment from leaking hydraulic fluid

✔ INCREASE PRODUCTIVITY
- Prevent unintended downtime
- Meet or exceed productivity goals
- Reduce non-productive time
- Create potential business growth opportunities
