STUCCHI SOLUTIONS

HEAVY DUTY DEMOLITION

OVERVIEW

A contractor had to complete a bridge demolition in downtown Denver within a 56 hour time frame. They had to ensure uptime of equipment with hydraulic quick couplers that would stand up to the rigorous application with quick changeover of attachments, without failure.

CHALLENGE

Completing the project on time meant the difference between a profitable operation or a \$50,000 per hour fine. They had to ensure equipment uptime and interchangeability with all additional rental equipment. They needed heavy duty quick couplers that would perform during the toll two days of heavy hammering and attachment changeovers, with the right PORT connections, without failure.

SOLUTION

Our quick coupling specialist, Mike Bauer, formed a relationship with our client as well as the equipment supplier to troubleshoot and provide total product and process support. We ensured that the VEPHDL would provide complete interchangeability with their multi-function excavator, the rented equipment and attachments.

The Stucchi Solution—the VEPHDL provided reliable, failsafe hydraulic solutions with complete interchangeability.

Mike asked the important questions about the project, the tools in use, made sure that the contractor had the required extra sets of couplers for easy changeover of attachments and provided tips and recommendations for plumbing solutions. By working closely with the contractor and the equipment dealer, this three way execution by our solutions specialist ensured coordination of all parties for successful completion of the project.

RESULTS

The contractor completed the bridge demolition ahead of schedule and secured future projects with the DOT.

BENEFITS

Utilizing Stucchi's VEPHDL heavy duty, locking quick coupler, this contractor was able to:

- complete the project ahead of schedule
- meet revenue goals and secure future projects
- meet environmental and safety goals with leak-free performance

STUCCHI SOLUTIONS MEASURE THE BENEFITS

Delivering Safety/Health, Total Customer Satisfaction, Efficiency, Environmental, and Productivity Results

✓ ENSURE SAFETY

- Reduce number of reportable workplace incidents and injuries
- Meet continuous improvement safety initiatives
- Secure operator safety by defeating 'the silent killer', stored energy with thermal expansion
- Reduce incidents of slips, trips, and falls caused by leaking hydraulic fluids

✓ TOTAL CUSTOMER SATISFACTION

- Meeting total customer needs for Safety/ Health, Efficiency, Environmental Impact and Productivity issues
- Offering total solutions instead of stop-gap measures alone, for complete customer satisfaction

✓ IMPROVE EFFICIENCY

- Meet deadlines by remaining on schedule
- Eliminate work shutdowns due to leakage concerns
- Save time switching out equipment lines
- Create more time for preventive maintenance

✓ ELIMINATE ENVIRONMENTAL ISSUES

- Reduce cost by eliminating fines and remediation fees
- Protect environment from leaking hydraulic fluid

✓ INCREASE PRODUCTIVITY

- Prevent unintended downtime
- Meet or exceed productivity goals
- Reduce non-productive time
- Create potential business growth opportunities
